

## **Client #4**

Client #4 has a very bad case of psoriasis all over his body. A case that has broken out on his arms, legs and stomach but that has also made his ankles swell and his skin build up and crack on his hands and feet. He started sessions on 12/09/2017 and has done 9 sessions total. After the first session he said he had a lot more energy and had a feeling of well-being that he could exactly describe, but, that he just felt better mentally and emotionally. He has had this same experience after all the sessions since as well. By the 5<sup>th</sup> session he noticed that the swelling in his ankles started to reduce and he felt like it was helping his condition. He has had about 5 to 6 days to assimilate the energy after all three of his sets of 3 sessions in a row. It has been about 10 days since his last session and the swelling in his ankles has gone down quite a bit and the condition is gradually improving. He credits the healing computer for the improvement because he hasn't done anything else to treat his psoriasis, aside from moisturizing his skin, but the computer sessions. He is going to start more sessions in a few days so there will be another update as to how he is doing.
